Nazwa	**Nexxis Network switch for the digital operating room**
Cena	**0,00 zł**
Producent	**Barco**

OPIS PRODUKTU

The 10 Gbps network switch is the backbone of the digital operating room system architecture. It ensures distribution of video, audio and data with near-zero latency, in and beyond the operating room. All information is distributed over the same fiber cable, ensuring all-round connectivity. Additionally, one switch can host multiple operating rooms and allows you to monitor and solve technical issues, without entering the OR. This 10 Gbps network switch can easily be interconnected with the existing OR network, featuring high scalability and flexibility inside the operating room and the hospital.
This product is a component of the following products
Nexxis for OR
IP imaging and audio management platform
