Mitsubishi

OPIS PRODUKTU

Mitsubishi's Diamond Vision ODT10 LED screen offers superb image clarity and uniformity for outdoor fixed installation applications, whether displaying video, graphics or text.

For outdoor installations where a larger screen size is required, ODT10 is an excellent choice. At 10 mm pixel pitch, Mitsubishi's unique black package gives the ODT10 a phenomenal contrast level, showing deep black and superb colours as a result. The screen is rated accurately at 5,000 cd/m², which is ample for most outdoor applications in full, direct sunlight. ODT10 offers excellent viewing angles both horizontally and vertically, and colour integrity is maintained throughout the viewing cone - an important factor for commercial and sports applications.

With colours resolved exceptionally close the screen with Mitsubishi's own 3in1 pixel design, the minimum viewing distance is surprisingly short. Mitsubishi's proprietary electrical and mechanical design represents a dramatic step forward in outdoor LED screen performance, as our unique technologies deliver unfaltering uniformity, seamless images and unrivaled reliability. The construction is sturdy and robust, yet lightweight and esthetically pleasing, so integrating ODT10 into any environment should be very straightforward. Service access for maintenance is available from the front and the rear, giving you more flexibility to choose your screen location and enclosure design. The ODT10 is set to continue as the preferred choice for outdoor applications where quality must not be sacrificed, even though pixel resolution and screen size may be dictated by local conditions.
